Subject: FW: Pensacola Channels Dredged Material Eval - draft report

Importance: High

To all,

Attached is the DRAFT Pensacola Harbor Sediment Evaluation Report for your review. Please provide comments back to me by COB 26th of April. I'd like to have a follow-up meeting on the 30th of April at 9 am central/10 am eastern to discuss any comments. Please let me know of your availability for the 30th meeting and then I will confirm/send out call-in number. Thanks,

Jenny Jacobson

Subject: Pensacola Channels Dredged Material Eval - draft report

Jenny -

Please find attached the draft report for the Pensacola Federal navigation channel Dredged Material Evaluation. The Draft Report includes the following:

- * Project background and objectives;
- * Overview of field sampling activities;
- * Methodologies for analytical testing;
- * Results of bulk sediment and elutriate testing;
- * Results of water column and sediment bioassays;
- * Results of 28-day bioaccumulation testing;

- * Results of the tissue analysis; and
- * Summary of limiting permissible concentration (LPC) for ocean placement.

Based on the evaluation of the limiting permissible concentration (LPC) included in the report, material from each of the channel reaches will pass for ocean placement in the Pensacola Offshore ODMDS.

Hardcopies of the draft report and draft Section 103 evaluation will follow via mail.

If you have any questions about this report, please do not hesitate to give me a call.

Thanks!

Karin
